

AMENDMENTS TO THE SPECIFICATION

Please amend paragraphs [0040] and [0045] of the specification, as follows:

[0040] A drug solution injector body 1 comprises a housing 11 and a drug solution reservoir 12. The housing 11 is made of a synthetic resin and is transparent except a part of the housing on the side of an injection line 2 to allow the user to observe an interior of the housing. The housing 11 is marked with a scale 111 as a measure of an injection volume of the drug solution, which is used to know a rough injection volume of the drug solution. The housing 11 is provided at the upper part thereof with a connecting port 13 for connection to the ~~injection line~~ injection line 2. In this embodiment, the housing 11 is provided with one connecting port 13, but it may be provided with two or more connecting ports. In case of one connecting port 13, the injection line 2 is made into a removable type and is connected to the connecting port 13 after injection of a drug solution through a syringe or the like.

[0045] The spring-fixing member 31 is composed of a combination of two identical parts of a synthetic resin, which are fixed by bonding together with a ~~connector 27~~ connector sandwiched between them, the connector ~~connector 27~~ being attached to a proximal end of the injection ~~line~~ line 2. The spring 33 is fixed by bonding at one end thereof to the spring-fixing member 31.
